Scholastic Discover More™ Shark Attack!

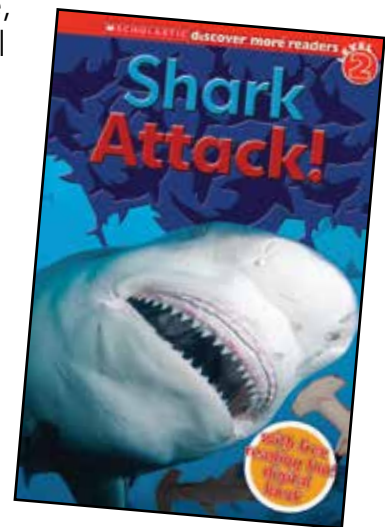

by Gail Tuchman

Booktalk!

Sharks have lived in the oceans for more than 420 million years. Even before there were dinosaurs! They are survivors because they are powerful predators.

Sharks can twist and turn and bite like no other sea creature, and they have a sixth sense (we only have five). Their special sixth sense is electroreception, which is detected in salt water only, so they can find anything, even objects buried in sand. And some sharks will eat anything – even a boot!

Prepare to be amazed and awed by the world of sharks.

Best for ages 6–9
