Fly Guy Presents: Space

by Tedd Arnold

Booktalk!

Fly Guy is determined to learn all he can about space. Going to the science museum with his pal, Buzz, is a good start.

Together, they learn about scientists who explore space (astronauts), dirty snowballs (comets), the moons in our solar system, and the names of the planets – including our own. They are surprised to learn dogs and monkeys were the first space travelers – before humans!

Grab your space suit and go on an exciting exploration with Fly Guy and Buzz as they discover the wonders of our universe!

Best for ages 6–8
