

Parents:

In school, your child has been learning about the formation of Earth's continents. Continue your child's education at home with the activity below.

Sincerely,
20th Century Fox and Scholastic

Continental Clues

Earth once had one giant landmass that split into continents. Plants and animals that once lived together were separated. Use the map and the key below to answer the riddles that follow.

Plant and Animal Remains Found Across the Globe

Key	
	Mesosaurus
	Glossopteris
	Brachiosaurus

Check out *Ice Age: Continental Drift* in theaters on July 13, 2012! Visit www.iceagemovie.com.

1. My neck resembles a giraffe's and the location of my remains proves that three continents must have once been connected. Who am I?

2. Geologists believe five different landmasses were connected because of where my tongue-shaped leaves were found. What am I?

3. The two continents where my reptile fossils have been found were once connected. Who am I?
