Directions for Where’s Johnny?

Cut out the cards and lay the cards that your student needs to work on out on the table. You will hide the Johnny Appleseed card under one of the cards that you have laid out.

You can put out uppercase vowels, sets of uppercase and lowercase letters, or numbers to work on. You can put out 5 cards or 26 cards. It is completely up to you how many and what cards you play with.

The objective of the game is to find Johnny Appleseed.

The youngest player goes first then continue clockwise. They call out the desired response (letter name or letter sound) of the card and then lift it up to see if they found Johnny under their card. If they give the wrong the answer the next player gets the card and if Johnny is under the card then that person wins!

The game needs to be printed on card stock to make it more difficult to see Johnny under the game cards.
