

Huntsville is a city in north Alabama, while Daphne is a city near the southern border of Alabama and Florida. Huntsville is a larger city than Daphne, though both cities have under 200,000 residents. Both cities have large high schools that compete against each other at the state level. NASA and Huntsville Hospital are large employers in Huntsville, while The University of South Alabama is one of the Daphne area's largest employers.

There are many serious reasons to not do drugs. One reason is that drugs can affect your growth and development. Taking drugs can stunt your physical growth and can cause your brain to not completely develop normally. Because drugs can alter your mood, you can become dependent on them. As a result, you can be addicted and feel like you need more and more of the drug. Death by overdose results from taking too much of a drug at a time, therefore, you should stay away from drugs completely.

If you want to win the science fair, you have to do some planning. Decide on the problem you want to solve or the question you want to answer. Then, research the topic to see what you can learn about the topic. Pose your question and write your hypothesis. Next, gather the materials you need to conduct the experiment and get to it! When you are all done, make sure you write about your findings. It is ok if your hypothesis wasn't true. Finally, display your work in an attractive way. Good luck!

Volcanoes are really cool! The inside of the earth is so hot even rock can melt, which creates magma. Because heat causes things to expand, the magma "grows" and creates pressure inside the volcano. Since there is nowhere to go, magma is forced up to the surface and can explode! If this happens, the area should be evacuated because hot lava can level homes and cause great destruction.

One of my favorite books is *The Whipping Boy*. In this book, the boy that is whipped when the prince is naughty has to run away with the bratty prince. They have quite an adventure and become friends, but there are many twists and turns as highwaymen and the king's guards hunt them.

The movie version is not quite like the book. For starters, the whipping boy in the movie has a sister that doesn't exist in the book. Several of the scenes are out of order from the book. While it is a good movie, I wish they had stuck to the original script.

Mummies were very important to ancient Egyptians. There were many steps to creating a mummy, but some were the same for most every human or animal. The organs were all removed except the heart. The body was covered with salt for many days. Oils were rubbed over the skin and then the mummy was wrapped in linen. Bodies were able to stay preserved on their trip to the afterlife.

Answer Guide

Comparison / Contrast

Huntsville is a city in north Alabama, **while** Daphne is a city near the southern border of Alabama and Florida. Huntsville is a larger city than Daphne, though **both** cities have under 200,000 residents. **Both** cities have large high schools that compete against each other at the state level. NASA and Huntsville Hospital are large employers in **Huntsville**, while The University of South Alabama is one of the Daphne area's largest employers.

Cause and Effect

There are many serious reasons to not do drugs. One reason is that drugs can affect your growth and development. Taking drugs can stunt your physical growth and can **cause** your brain to not completely develop normally. **Because** drugs can alter your mood, you can become dependent on them. **As a result**, you can be addicted and feel like you need more and more of the drug. Death by overdose **results** from taking too much of a drug at a time, **therefore**, you should stay away from drugs completely.

Sequence

If you want to win the science fair, you have to do some planning. Decide on the problem you want to solve or the question you want to answer. **Then**, research the topic to see what you can learn about the topic. Pose your question and write your hypothesis. **Next**, gather the materials you need to conduct the experiment and get to it! **When you are all done**, make sure you write about your findings. It is ok if your hypothesis wasn't true. **Finally**, display your work in an attractive way. Good luck!

Cause and Effect

Volcanoes are really cool! The inside of the earth is so hot even rock can melt, which creates magma. **Because** heat causes things to expand, the magma "grows" and creates pressure inside the volcano. Then **since** there is nowhere to go, magma is forced up to the surface and can explode! If this happens, the area should be evacuated because hot lava can level homes and cause great destruction.
