

Enlarging grid patterns is so easy that children can do it. Each side of a square equals one inch.

- Enlarge the easiest patterns directly onto a large sheet of any paper. Using a measuring tape, measure and mark all corner points of the pattern on the paper. Then draw the full-size pattern by connecting the points with lines as shown.
- To enlarge a pattern with more details, use a cardboard cutting board with a grid printed on it. Tape a sheet of tracing paper to the full-size grid by marking all corners and then connecting them with lines as shown. Or use a one-inch grid paper.

Robe

Sewing directions

Stitch sides and underarms. Stitch top and back seam of hood. Stitch hood around neck opening.
