

IDAHO, MONTANA, WYOMING:
Yellowstone National Park Activity

FAITHFUL FRIENDS

I'm an Old Geezer (hee, hee!),
but THAT is an Old Geysier!
We've been faithful friends for a
long time and can count on each
other like clockwork!

Old Faithful in Yellowstone National Park is a spectacular thermal geyser that erupts once every 45 to 90 minutes. If you can hang out long enough, keep track of how much time passes between your Old Faithful sightings.

What qualities do you look for in a faithful friend?

Reliable	_____	_____
Trustworthy	_____	_____
Genuine	_____	_____
Honest	_____	_____

Did You Know?

In the old days, people used to lay their dirty laundry on top of the geyser site so that the erupting hot water would wash their clothes.

Old Faithful was the first geyser in Yellowstone National Park to be given a name.

Old Faithful eruptions last anywhere from 1.5 to 5 minutes. In that amount of time, the geyser gushes anywhere from 3,700 to 8,400 gallons of water. That's a lot of hot water! How hot? The water is about 204° F and the steam can be up to 350° F!
