

STEM Activities for Grades 3-5

Unit 3: Project Design and Development

Challenge 7: How can we improve innovative designs?

Get Prepared

Challenge Goal: Learn about the role of revision in the design process

Time Needed: 45 minutes

What You Will Need:

Printouts	Materials
• Activity Sheet H: Troubleshooting	Samsung tablets
	• paper
	• pens or pencils
	team notes and sketches on their innovation ideas (from Activity 6)

Connect With the Home:

Now that you've begun Unit 3, send home the **Council-to-Home** Communication: Unit 3 Overview so family members can read about the activities for the final unit of **Building Blocks.**

Note: Kids may use the activity sheet printouts or they may follow along on their tablets at: www.scholastic.com/sparks2.

Engineering in Action

Goal Selection:

1. Ask two or three teams to share their experiences with creating their own innovations. Ask: What community need does your idea meet? What goals did you set for your idea?

Setting the Strategy:

- 2. Explain that the idea for an innovation is just the first step in creating a community solution. Finished designs don't get built right after the idea is created. Designs go through many revisions. Engineers create a plan and come up with strategies to achieve set goals. They put their designs through a design development process to make sure their innovations work in the best possible way and offer the best solution to a problem.
- 3. Ask kids: Reflect on how engineers might determine what improvements to make to a design? (They look for problems in the design and make sure it meets all the identified community needs; they develop models of their designs and test them; they get feedback from consumers and other engineers.)

STEM Activities for Grades 3-5

Unit 3: Project Design and Development

Challenge 7: How can we improve innovative designs? (continued)

Shifting Gears: STEM Challenge!

- Tell kids that, like real engineers, they need to evaluate their design ideas before settling on a final design. They'll test and revise their ideas with the help of a role-playing activity.
- 2. Have teams partner with one other team to complete Activity Sheet H: Troubleshooting. The testing groups will take turns putting on a short skit to act out how each team's innovations will work.
- 3. Hand out **Activity Sheet H: Troubleshooting**. Give teams ten minutes to choose characters based on the roles described on the chart on the activity sheet then plan a skit to answer the questions listed below. Ask them to think carefully about their innovation ideas. Their role-playing should demonstrate:
 - What their innovations will do
 - What goals their innovations will meet
 - Who will use their innovations
 - Who will operate their innovations
 - Where their innovations will be located in the community
 - Who will be impacted by their innovations

- 4. Now that teams have developed their ideas, explain that it's time to role-play. Make sure that each of the four group members has a specific role to play. Group members will play the following roles:
 - Role #1: The person who will use and benefit from the innovation
 - Role #2: The person who will operate the innovation
 - Role #3: The person who will be affected by the innovation's location and/or presence in their community
 - Role #4: The person who will be critical of the innovation
- 5. Give groups five minutes to act out a short scene involving the first team's innovation. After five minutes, have the kids stop and take notes on what worked and what didn't. Then have the groups start a new role-play to test out the other team's innovation so that both teams get feedback on their design ideas.

Use the Tablets!

Have kids separate into their teams and review the issues they discovered during the role-play activity. Tell them to use this information to revise their innovation's design in the Picasso app on their tablets. Teams may also choose to draw their solutions on paper.

NAME:		

Troubleshooting

Will your innovation work as expected? You won't know until you test it in a real-life scenario. Use this role-play activity to look for possible problems with your design.

Get Ready

Describe the characters in your role-play activity. These should represent specific people who will interact with your innovation.

Role	Character Description
Role #1: The User Who will use the innovation? Who will the innovation help? Choose a character who will use the innovation and be helped by it.	
Role #2: The Operator Who will operate the innovation? Choose a character who will make the innovation work.	
Role #3: The Neighbor What size will the innovation be and where will it be located? Is the innovation large or small? Will the size and location of the innovation impact someone in the community? Choose a character who has to get used to the innovation in the community.	
Role #4: The Critic Will someone in the community dislike the innovation? Think of a character who might not like the innovation and might complain about it. This character's criticisms can help you come up with design solutions!	

Act It Out

Now that you have your characters, act out a short scene involving your innovation. All team members should be involved and pretend to interact with the innovation. As you're acting it out, notice what works the way you think it will and what doesn't.

Reflect and Shift Gears

On the back of this sheet, write down any issues that arose during the role-playing activity. Then brainstorm solutions to address these issues so your innovation better meets your community's needs.
